Interview questions categorized by the Social Translucence Framework
From the study "Investigating Students' Experiences with Collaboration Analytics for Remote Group Meetings"

Dimension	Questions
Visibility	1. What information can you get from the graphs/ visualizations? 2. Can the graphs/visualizations represent your contribution/participation to collaboration in a clear and easy-understand way? 3. Can the graphs/ visualizations represent collaboration experience in remote meetings? Are they accurate? 4. What other information would help you improve your collaboration in remote meetings?
Awareness	1. Can the graphs/visualizations help you be aware of your own contribution (to collaboration in remote meetings)? 2. Can the graphs/visualizations help you be aware of other teammates' contribution (to collaboration in remote meetings)? 3. How did you compare different students' contributions (to collaboration in remote meetings)?
Accountability	1. Did you change your behaviours based on your observations of the graphs/visualizations (of collaboration in remote meetings)? 2. Did your teammates change their behaviours based on their observations of the graphs/visualizations (of collaboration in remote meetings)?
Privacy concerns	1. How do you feel when you know Zoomsense is observing your behaviours in remote meetings? 2. Do you have other group meetings? If yes, did you and/or your friends behave differently in the remote meetings that are not observed with the Zoomsense? 3. Are there any barriers to your contribution in remote meetings? How do you think these could be mitigated?
